 Department of Toxic Substances Control
 Southern California Region
 Site Mitigation Cleanup and Operations Branch
 1011 North Grandview Avenue
 Glendale, California 91201

Subject: Addendum to the Removal Action Workplan/Preliminary Environmental Assessment,
 Former Ameron Facility, 4635 Firestone Boulevard, South Gate, California

Dear Mr. Iskarous:

This document serves as an update and addendum to our February 1, 2005 Workplan in Support of Further Characterization as Part of Removal Action/Preliminary Environmental Assessment (RAW/PEA) for the former Ameron Facility located at 4635 Firestone Boulevard, South Gate, California ("the Site"; Figures 1 and 2). This addendum is being submitted by LFR Levine-Fricke (LFR) on behalf of Overton Moore Properties (OMP). OMP has entered into a voluntary cleanup agreement with the Department of Toxic Substances Control (DTSC). The workplan and this addendum were prepared and will be implemented in general accordance with the guidelines of the California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control (DTSC), as detailed in the PEA Guidance Manual (January 1994, second printing June 1999).

A project kick-off meeting was held at DTSC on March 10, 2005, and a follow-up Site visit was held on March 17, 2005. On April 11, 2005, DTSC gave verbal approval to Mr. Mark Cousineau of Hazard Management Consulting to implement the characterization scope of work outlined in the workplan. This addendum describes the results of the characterization and subsequent revisions to the removal action workplan.

Sampling Activities

On April 25, 2005, LFR personnel collected 4 background samples and advanced 12 soil borings using a direct push (Geoprobe) rig at three areas (Railroad Spur, Former Aboveground Storage Tanks, and Stripping Building) for further characterization as described in the workplan. Two additional soil borings were drilled at the Fabrication Building, one in an area of discolored soil (DIS) and one near a former underground storage tank (FAB-UST). Twenty-eight soil samples and two duplicate samples were collected from depths of 1 to 20 feet below ground surface (bgs) and analyzed for selected chemicals of concern including metals using EPA 6010/7000 series, volatile

organic compounds (VOCs) using EPA Method 8260B, and total petroleum hydrocarbons with carbon chain distinction (TPH-cc) using EPA Method 8015 modified. Soil samples were collected in stainless steel sleeves, and were labeled with the boring identification number, the time and date of sample collection, the analysis requested, and the name of the sampler. The samples were stored in a chilled ice chest and transmitted under chain-of-custody protocols to Associated Laboratories of Orange, California (a California-certified analytical laboratory) for chemical analysis. Lithologic logs are included as Attachment A.

Results of Sampling Activities

Background Sampling: The four background samples were collected from areas of the Site that were not identified as areas of concern. The background samples were collected from the surface and analyzed for metals using EPA Method 6010/7000 series. Background sample locations are shown on Figure 2. Barium, beryllium, chromium, cobalt, copper, lead, molybdenum, nickel, silver, vanadium, and zinc were detected in at least one background sample at concentrations typical of southern California background metals concentrations. Arsenic was not detected above the laboratory reporting limit of 1 mg/kg in the background samples for the Site.

Railroad Tracks: Four soil borings (SB-A, SB-B, SB-C, and SB-D) were advanced to depths of 5 feet bgs at the railroad tracks (Figure 3). SB-B was relocated approximately 45 feet north of the location shown in the workplan due to access constraints. Soil samples were collected at depths of 2.5 and 5 feet bgs. The 2.5-foot soil samples were analyzed for TPH-cc and arsenic using EPA Methods 8015 (modified) and 7196, respectively. TPH-cc and arsenic were not detected above the laboratory's reporting limits.

Stripping Building: Four soil borings (SB-E, SB-F, SB-G, and SB-H) were advanced to depths of 10 feet bgs at the former Stripping Building (Figure 4). Soil samples were collected at 1, 5, and 10 feet bgs. The 1- and 5-foot soil samples were analyzed for TPH-cc using EPA Method 8015 modified and VOCs using EPA Method 8260B. TPH and VOCs were not detected above the laboratory's reporting limit in SB-E, SB-F, and SB-G. VOCs including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, isopropylbenzene (cumene), n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, toluene, and total xylenes were detected in the 1-foot soil sample collected from SB-H at concentrations ranging from 1,010 micrograms per kilogram ($\mu\text{g}/\text{kg}$) isopropylbenzene to 67,700 $\mu\text{g}/\text{kg}$ 1,2,4-trimethylbenzene. VOC concentrations were below U.S. Environmental Protection Agency (EPA) preliminary remediation goals (PRGs) for both residential and industrial soil, with one exception: 1,2,4-trimethylbenzene was detected in the 1-foot sample at a concentration of 67,700 $\mu\text{g}/\text{kg}$, which exceeded the residential PRG of 52,000 $\mu\text{g}/\text{kg}$. 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and total xylenes were detected in the 5-foot sample at concentrations of 6.7 $\mu\text{g}/\text{kg}$, 2.1 $\mu\text{g}/\text{kg}$, and 4.1 $\mu\text{g}/\text{kg}$, respectively. The 10-foot sample was analyzed for TPH and VOCs. TPH and VOCs were not detected in the 10-foot sample.

Former Aboveground Storage Tanks: Four soil borings (SB-I, SB-J, SB-K, and SB-L) were advanced to depths of 10 feet bgs in the area of the former aboveground storage tanks (Figure 5). Soil samples were collected at 1, 5, and 10 feet bgs. The 1- and 5-foot soil samples were analyzed

for TPH-cc using EPA Method 8015 modified. Soil samples were also analyzed for VOCs using EPA Method 8260B as requested by DTSC in the March 10, 2005 kick-off meeting. TPH and VOCs were not detected above the laboratory's reporting limit in soil samples collected from SB-I, SB-J, and SB-L or the 1-foot soil sample collected from SB-K. TPH (carbon chain C₂₂-C₃₆) was detected in the 5-foot soil sample collected from SB-K at a concentration of 90 milligrams per kilogram (mg/kg). The 10-foot soil sample was analyzed for TPH-cc. TPH was not detected in the 10-foot soil sample.

Fabrication Building: Two soil borings (DIS and FAB-UST) were advanced to depths of 10 to 20 feet bgs in the Fabrication Building area (Figure 6). Soil samples were collected at depths of 5 and 10 feet bgs from soil boring FAB-UST and at depths of 0.5, 10, 15, and 20 feet bgs from soil boring DIS. The soil samples were analyzed for TPH-cc using EPA Method 8015 modified and VOCs using EPA Method 8260B. VOCs were not detected above the laboratory's reporting limit in the FAB-UST boring. TPH was detected in the 5-foot sample at concentrations ranging from 613 mg/kg to 16,700 mg/kg. TPH was detected at concentrations of 10 mg/kg (carbon chain C₆-C₁₀) and 6 mg/kg (carbon chain C₁₀-C₂₂) in the 10-foot soil sample. TPH (C₂₂-C₃₆) was detected in the DIS soil boring at concentrations ranging from 17 mg/kg in the 20-foot sample to 33,700 mg/kg in the 0.5-foot sample. TPH (C₁₀-C₂₂) was detected in the DIS soil boring at concentrations of 100 mg/kg in the 0.5-foot sample, 194 mg/kg in the 10-foot sample, and 59 mg/kg in the 15-foot sample. Carbon chain C₁₀-C₂₂ was not detected in the 20-foot soil sample. Total xylenes were detected at a concentration of 6.8 mg/kg in the 0.5-foot soil sample collected from soil boring DIS. No other VOCs were detected in the soil samples collected from this boring.

Laboratory analytical results are summarized in Table 1. Sample locations are depicted on Figures 2 through 6. The laboratory data sheets and chain-of-custody documents are presented in Attachment B.

Quality Assurance/Quality Control

Two duplicate samples, DUP-1 (duplicate of SBK-10) and DUP-2 (duplicate of SBE-1), were collected and submitted to the analytical laboratory for analysis by the same analytical methods as the primary soil samples. TPH-cc and VOCs were not detected in the primary or duplicate soil samples analyzed.

Removal Action Activities

The following revisions are proposed for the removal action activities outlined in the February 1, 2005 removal action plan submitted to DTSC.

Railroad Tracks: No revisions to the proposed removal action activities.

Stripping Building: Based on the data for SB-H, LFR proposes to move the eastern boundary of the proposed excavation 5 feet to the east. The revised estimated extent of excavation is 25 feet by 20 feet by 7 feet deep. The revised estimated excavation volume is approximately 130 cubic yards

(cy). Two additional confirmation samples will be collected and analyzed in accordance with the protocols outlined in the February 1, 2005 RAW/PEA, for a total of five confirmation samples (bottom and sidewalls) at the Stripping Building.

Former Aboveground Storage Tanks: Based on the data for SB-K, LFR proposes moving the southern boundary of the eastern excavation approximately 10 feet to the south. The revised estimated extent of excavation is 35 feet by 60 feet by 7 feet deep. The revised estimated excavation volume is approximately 544 cy for the eastern excavation at the former aboveground storage tanks. The 117 cy estimated for the western excavation did not change, for a total estimated volume of 661 cy for the aboveground storage tank area. Four additional confirmation samples will be collected from the eastern excavation area and analyzed in accordance with the protocols outlined in the February 1, 2005 RAW/PEA.

Fabrication Building: Two additional areas at the Fabrication Building are proposed for excavation. An approximately 10-foot by 20-foot by 10-foot deep excavation around FAB-UST (approximately 75 cy) and an approximately 10-foot by 10-foot by 20-foot deep excavation around DIS (approximately 75 cy) are proposed to be included in the removal activities. Five confirmation samples will be collected from each excavation area (bottom and four sidewalls) and analyzed for TPH-cc and VOCs in accordance with the protocols outlined in the February 1, 2005 Removal Action Workplan.

Soil sample locations, corresponding analytical results, soil excavation boundaries, and confirmation sample locations are presented on Figures 2 through 6.

Conclusions and Recommendations

Further characterization activities were conducted at the Site in accordance with LFR's RAW/PEA, which was submitted to DTSC on February 1, 2005. Based on the analytical results, the excavation areas at the Stripping Building and one of the excavation areas at the Former Aboveground Storage Tank area have been expanded. In addition, two small excavations have been added at the Fabrication Building. A total of 16 additional confirmation samples (for a total of 47) will be collected and analyzed in accordance with the protocols outlined in the RAW/PEA.

Prior to field activities, all proposed soil sampling activities were discussed with the DTSC and verbal approval was obtained. LFR recommends that DTSC grant approval to conduct the removal action activities in the next two weeks at the Site.

Proposed Work Schedule

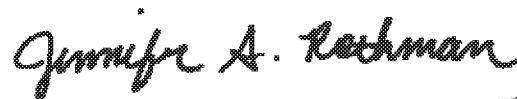

Attached to this letter is our proposed work schedule. We estimate that field activities will require 1 to 2 weeks, laboratory analysis will require 10 to 15 working days, and report preparation will require 2 to 3 weeks to complete. We request approval to initiate the removal activities within the next two weeks. At the completion of the removal activities, we will prepare and submit a PEA/Remedial Action report to DTSC.

If you have any questions, please contact Melissa Schuetz, R.E.A., or either of the undersigned at 714-444-0111.

Sincerely,

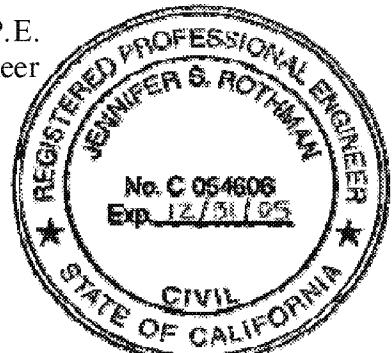

Derrick S. Willis

To: 'Kristen Walker'; Willis, Derrick
Subject: RE: draft excel results

[49443-24]

149443-304

Looks like we need to run SBH-10 for VOCs and TPH-cc and SBK-10 for TPH-cc.

Thanks,

Melissa

To: Derrick.willis@lfr.com; 'Schuetz, Melissa'
Subject: draft excel results

Here are all the results put into the excel spreadsheet. This is a draft. I will make sure to get the PDF (and EDD) final signed copy over to you sometime Monday morning.

Have a great weekend.

Kristen

To: ""Kristen Walker" <kportra@associatedlabs.com>,
"droberts@associatedlabs.com" <droberts@associatedlabs.com>

CC: "Willis, Derrick" <Derrick.Willis@lfr.com>

Please add VOCs for the following Ameron samples;

(49443)

SBI-1 ~296

SBI-5 ~297

SBJ-1 ~294

SBJ-5 ~300

SBK-1 ~302

SBK-5 ~303

SBL-1 ~305

SBL-5 ~306

Thanks,

Melissa
